PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience building and operating production software across **Python, TypeScript, React, Next.js, FastAPI, Node.js, SQL, and cloud-native systems**. Experienced in designing backend services and HTTP APIs, relational data models, distributed service workflows, system integrations, and production observability. Hands-on experience shipping **LLM-backed features** and building evaluation, tracing, token usage, and cost-monitoring workflows around AI applications. Experienced with **Docker, Kubernetes, Kafka, Apache Spark, AWS, CI/CD, automated testing, and production troubleshooting**. Strong full-stack background with ownership spanning user-facing frontend experiences, backend services, databases, AI workflows, and deployment.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), Java, SQL
Frontend: React.js, Next.js, Redux, Context API, Tailwind CSS, HTML5, CSS3, Responsive Web Design, Reusable Components, Design Systems, Design Tokens
Backend: FastAPI, Python, Node.js, Express.js, REST APIs, GraphQL, HTTP APIs, Microservices, API Design, Async Programming
AI / LLM: OpenAI APIs, LLM Integration, Prompt Engineering, RAG Concepts, Embeddings, Vector Search, AI Workflows, LLM Evaluation, Langfuse, LLM Observability
Databases: PostgreSQL, SQL, MongoDB, Graph Databases, Vector Databases, Relational Data Modeling, Query Optimization
Distributed Systems / Data: Apache Kafka, Apache Spark, Event-Driven Workflows, Service-to-Service Communication, Distributed Data Processing
Cloud / Infrastructure: AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Linux, Containerized Services
Testing / Observability: Playwright, Jest, API Testing, End-to-End Testing, Regression Testing, Langfuse, Logging, Performance Troubleshooting
Development Tools: Git, GitHub, GitLab, Postman, Cursor AI, Claude Code, Figma, OAuth 2.0, JWT

PROFESSIONAL EXPERIENCE

Pivotor AI, USA Jan 2026 – Present
Software Engineer

- Build and operate production **backend services and HTTP APIs using Python and FastAPI**, supporting internal and partner-facing applications and service-to-service workflows.
- Design API contracts, validation, error handling, and service integrations across frontend applications, backend services, databases, and AI-enabled workflows.
- Develop full-stack features using **React.js, Next.js, TypeScript, Python, FastAPI, and PostgreSQL**, owning functionality across frontend, backend, and data layers.
- Design and maintain PostgreSQL schemas and SQL queries supporting application workflows, user data, AI workflows, and service integrations.
- Troubleshoot production issues across APIs, backend services, databases, asynchronous workflows, and external dependencies using logs, debugging, and root-cause analysis.
- Optimize backend and database operations by analyzing API behavior, application workflows, SQL queries, and data-access patterns.
- Build and maintain AI-enabled backend workflows using **Python, FastAPI, OpenAI APIs, and application-level orchestration**.
- Implemented **LLM observability and evaluation workflows using Langfuse**, including tracing model interactions, monitoring token usage, analyzing session-level behavior, and tracking model-level and request-level costs.
- Built usage and cost-tracking flows connecting LLM calls with application sessions and downstream usage data to support monitoring and operational analysis.
- Developed multi-step AI workflows where application services coordinate contextual information, AI processing, data retrieval, and downstream actions.
- Investigate failures in distributed application workflows involving multiple services, APIs, databases, and external dependencies, implementing fixes across application layers.
- Build automated frontend and end-to-end tests using **Playwright** and API testing workflows to validate production functionality and integration paths.
- Use **Docker, Kubernetes, AWS, Git, and CI/CD pipelines** to support development, deployment, maintenance, and troubleshooting of production services.
- Use Cursor AI and Claude Code during development for code investigation, implementation, debugging, refactoring, and test development while reviewing and validating generated changes.
- Collaborate directly with product, design, and engineering stakeholders to clarify loosely defined requirements, identify implementation approaches, and deliver production features.
- Developed LLM evaluation test cases and quality metrics to measure model responses across different prompts and scenarios, improving reliability of AI-driven application workflows.

Torry Harris Integration Solutions, India Jul 2019 – Feb 2024
Senior Software Engineer

- Built and maintained enterprise applications using **JavaScript, TypeScript, React.js, Node.js, Java, SQL, PostgreSQL, and MongoDB**.
- Designed and implemented REST APIs and **system-to-system integrations** connecting internal services, external applications, and third-party systems.
- Developed reusable React.js components and frontend workflows consuming backend APIs and distributed services.
- Designed relational database models and wrote SQL queries supporting application workflows, reporting, and data retrieval.
- Troubleshot backend, API, database, and integration issues using application logs, debugging, database analysis, and root-cause investigation.
- Optimized application and database operations by improving queries, data-access patterns, and backend processing workflows.
- Implemented authentication and authorization using OAuth 2.0 and JWT across application and API integrations.
- Collaborated with QA and product teams to reproduce production issues, identify root causes, and deliver tested fixes.
- Used Git, Docker, CI/CD pipelines, and cloud environments to support application development, deployment, and maintenance.
- Built a React and TypeScript **CPU analytics dashboard** for monitoring CPU utilization across hosts, processes, and pods.
- Developed real-time and batch data-processing pipelines using **Apache Spark, Apache Kafka, Java, and Micronaut**.
- Designed and implemented Java control-plane APIs supporting VM host and process CPU monitoring workflows.
- Worked with distributed data-processing workflows involving Kafka-based event streams, Spark processing, backend services, and cloud infrastructure.
- Investigated application and service performance issues across APIs, data pipelines, processing workloads, and cloud environments.
- Designed backend workflows for processing operational data at scale while maintaining reliable communication between services and downstream consumers.
- Collaborated with engineering teams to troubleshoot production issues, analyze system behavior, and implement maintainable fixes.

SELECTED PROJECTS

Course Discovery Platform

- Developed a full-stack application using **React.js, Node.js, Express.js, MongoDB, and Docker**.
- Designed REST APIs and backend services supporting course discovery, search, filtering, and application workflows.
- Built reusable React components and responsive interfaces integrated with backend APIs.
- Containerized application services using Docker and supported deployment through CI/CD workflows.

School Management System

- Developed a full-stack application using **React.js, Node.js, Express.js, PostgreSQL, and SQL**.
- Designed relational database schemas and SQL queries supporting student, teacher, and administrative workflows.
- Built REST APIs connecting frontend workflows with backend services and PostgreSQL.
- Implemented authentication, authorization, and role-based access control.

Software Engineering Intern – mPower, India Jan 2019 – Jun 2019

- Assisted with backend services, API integrations, database operations, application testing, and production issue troubleshooting.
- Worked with engineering teams to debug application issues, validate API behavior, and improve application reliability.

EDUCATION

Bachelor of Engineering in Computer Science 2015 – 2019
Visvesvaraya Technological University
